

ЗАБОТА ОБ IPV6: ИСТОРИЯ ДВУХ БОЛЬШИХ ПАРНЕЙ

Oleksiy Semenyaka
Qrator Labs

Жили-были в 2009 году...

...операторы Hurricane Electric и Cogent. И начал Cogent пиринговую войну. И порвал Cogent пиринговые отношения с Hurricane Electric. И IPv4 порвал, и IPv6 порвал... Ну, связность в IPv4 Hurricane Electric худо-бедно починил, а вот с IPv6 хуже вышло. Пытался Hurricane Electric помириться, да не тут-то было:

Looking Glass

This Looking Glass provides you with information relative to backbone routing and network efficiency, providing you with the same transparency that customers on our network receive directly.

Traceroute allows a user to follow a packet through the network to a specific destination. It shows the domain, IP address and the roundtrip packet times as it traces the route to the destination.

Ping can be used to show whether or not a device with a valid Internet address or domain name can return packets sent to it by a specified server.

If you experience a problem with this site that you would like to report, please use the [Contact Cogent Webmaster](#) form.

```
> host -t AAAA www.he.net  
www.he.net is an alias for he.net.  
he.net has IPv6 address 2001:470:0:76::2
```

Итоги подведём

1. Cogent и Hurricane Electric – de facto мировые операторы Tier-1 в IPv6.
2. Cogent отказывается поднимать пиринговый стык с HE. Это значит, что **в интернете отсутствует глобальная связность по протоколу IPv6 в крупном масштабе.**
3. Ситуация длится седьмой год, и не является секретом в индустрии, но...

4. ...ИНДУСТРИЯ ПРИВЫКЛА.
5. ...КЛИЕНТЫ НЕ ЗНАЮТ.
